Investment Strategy

This Fund is suitable for less conservative investors who can afford to deposit their available financial resources for at least 3 years and who seek returns higher than those offered by local bond markets. The portfolio of the Fund consists of high-quality corporate bonds mainly from the countries of Central and Eastern Europe where the Generali Group has strong analytical coverage. The currency risk is hedged. Due to the credit risk, the appreciation is usually higher than in the event of government bonds. The portfolio sensitivity to movement of interest rates is low.
